

# GLOBAL RESEARCH INSTITUTION

This project was for a global non-profit research institution that conducts independent research into global energy economics. The institution develops economic frameworks to help achieve effective alignment between energy policy objectives and outcomes. Its group of expert researchers represent more than 15 nationalities and collaborate internationally with leading research centers, organizations and governments to share knowledge and frameworks. The institute works to improve global well-being through research and work in effective energy policy.

## What do they use Knoema for:

Knoema partnered with the institute in 2016 to build their energy data portal. The portal serves as a prominent source of critical energy data and is designed to help interested parties better understand energy, economy and policies. Knoema adds new and additional energy economics datasets to keep the repository comprehensive and up-to-date. The institute's community of researchers leverage their data in conjunction with the world's data to make forecasts and build reusable models.

## How do they benefit:

Knoema Enterprise is a cost-savings tool for the institute because it dramatically reduces the time and effort researchers previously had to spend on data discovery, acquisition, cleansing, analysis, and management. The global team of researchers are able to access and manipulate all data they need in a single, integrated portal.

“

*“Researchers used to spend so much time collecting data, but now with Knoema's help, we are able to focus on forecast modeling with the data.”*

## Key Use Cases:

- Comprehensive data repository
- Model and forecast
- Manipulate and analyze
- Yodatai virtual assistant

## About Knoema

Knoema is the most comprehensive source of global decision-making data in the world. Our tools allow individuals and organizations to discover, visualize, model, and present their data and the world's data to facilitate better decisions and better outcomes.
